

16 - Linux runterfahren und neu starten

```
shutdown -h now  
halt  
reboot  
<Str><Alt><Enf> = reboot
```

Where to change the <Ctrl><Alt> effect.

- In /etc/inittab

To turn it off: change the command to:

```
/bin/echo "Finger weg von Tastature!!!"
```

and reboot manually to actualise the changes.

Note: When the <Ctrl><Alt> is pressed then the message `Finger weg von Tastature!!!` will be shown only once. Then nothing will happen when <Ctrl><Alt> is pressed again.
