

# QuietRIATT

# Rebuilding the Import Address Table Using Hooked DLL Calls

Jason Raber - Team Lead, Reverse Engineer

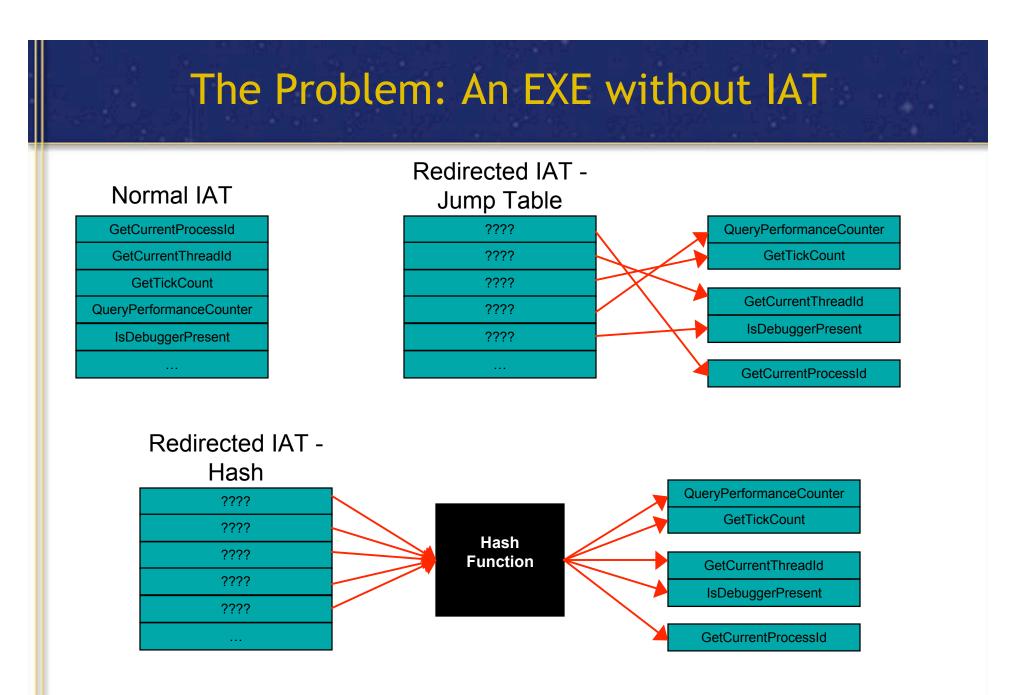

Brian Krumheuer – Reverse Engineer

### **Overview**

- The Problem: An EXE without an IAT
- How QuietRIATT Works
- Detours
- QuietRIATT
- Demonstration
- Summary
- Contact Info / Q&A

#### The Problem: An EXE without IAT

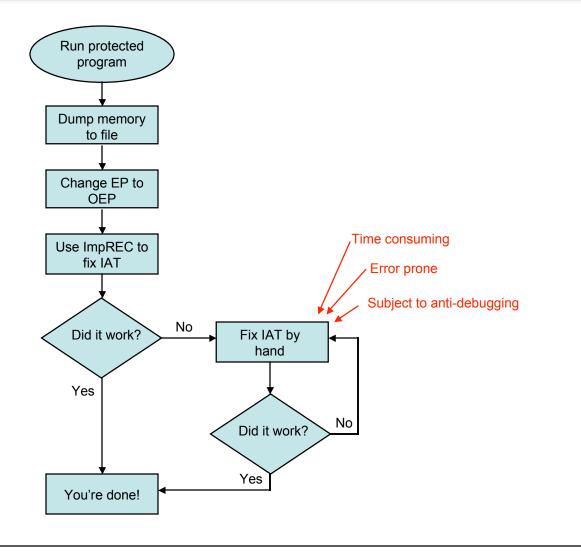

- Many protections redirect the IAT, some completely destroy it
- When ImpREC falls short, QuietRIATT to the rescue!
- Lengthy manual labor now takes seconds
- Uses rootkit technique to record DLL calls and assist in rebuilding the IAT

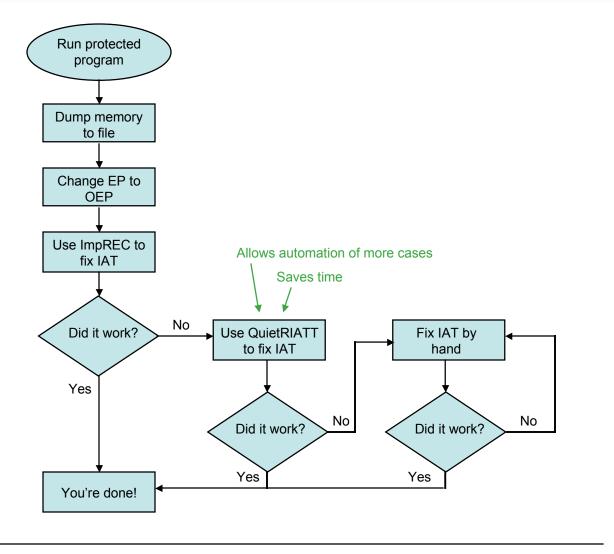

#### The Problem: An EXE without IAT

Removing Malware Wrapper-Style Protections

#### The Problem: An EXE without IAT

Removing Malware Wrapper-Style Protections

**RIVERSIDE RESEARCH INSTITUTE** 

#### Overview

- The Problem: An EXE without an IAT
- How QuietRIATT Works
- Detours
- QuietRIATT
- Demonstration
- Summary
- Contact Info / Q&A

## How QuietRIATT Works

- 1) Hook DLL calls using modified MS Detours
- 2) Detours generates a log file of DLL calls and return addresses
- 3) QuietRIATT annotates the IDAPro database
- 4) QuietRIATT generates a tree file with IAT info
- 5) Import tree file into ImpREC

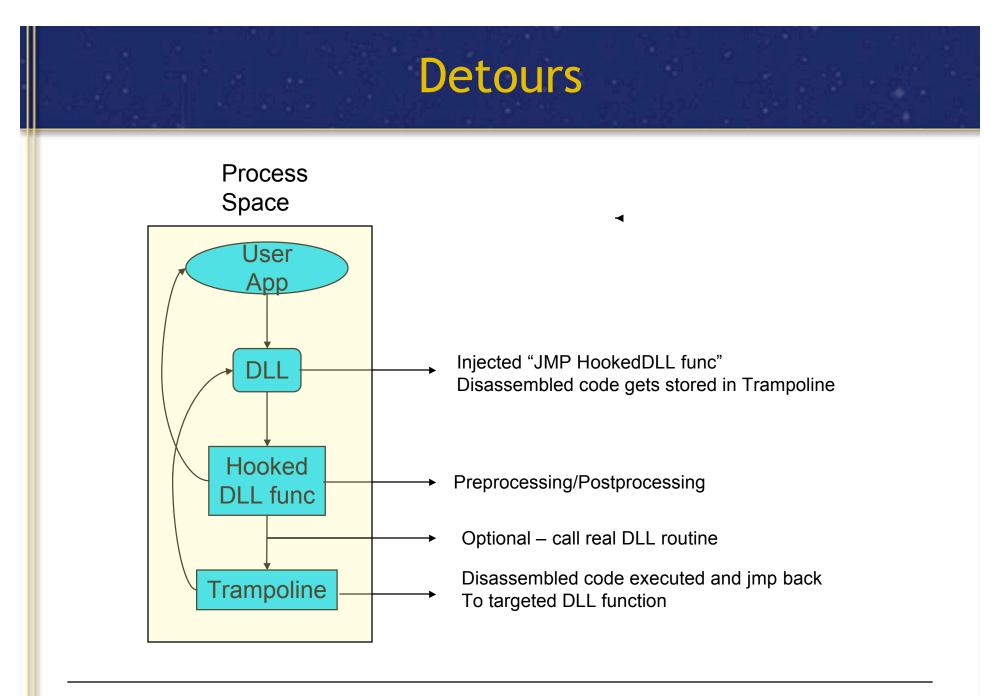

### **Overview**

- The Problem: An EXE without an IAT
- How QuietRIATT Works
- Detours
- QuietRIATT
- Demonstration
- Summary
- Contact Info / Q&A

## Why Detours

- Wanted something like Linux 'strace'
  - Traces system calls
- Detours 'traceapi'
  - Similar to strace but traces DLL calls
  - Outputs parameters and return values
  - Good diagnostic for reverse engineering endeavors

**RIVERSIDE RESEARCH INSTITUTE** 

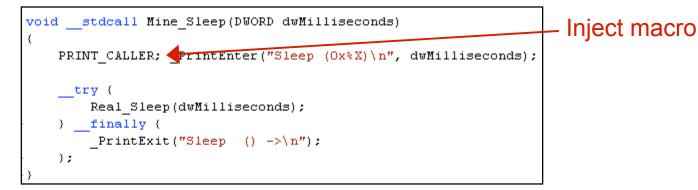

## **Detours in action**

- Kernel32 Sleep API call is rerouted to trampoline space
- Return address is pushed on the stack

004017F3 004017F4 00 <mark>4017F6</mark> 004017FC 00401801 00401807 00401807 0040180A 0040180F 0040180F	push ecx push 64h call ds:Sleep push offset aMain call ds:printf add esp, 4 call foo1 mov eax, ØABCDh push ØRFFFh	7C802440       90       nop         7C802441       90       nop         7C802442       E9       E9       53       86       93       jmp       Mine_Sleep       (10067830h)         7C802447       6A       00       push       0         7C802449       FF       75       08       push       dword ptr [ebp+8]         7C80244C       E8       4B       FF       FF       call       7C80239C         7C802451       5D       pop       ebp
voidstdcall M:	ine_Sleep(DWORD dwMilliseconds)	
{	-	
10067830 push	ebp	Prolog stuff
10067831 mov	ebp,esp	Note: SP is assigned to BP to set stack frame
10067833 push	OFFFFFFFh	Note. OF is assigned to be to set stack indine
10067835 push	101332BOh	
1006783A push	offset _except_handler3 <del>\1</del> 009	Stack – Grows High to Low
1006783F mov	eax,dword ptr fs:[00000000h]	
10067845 push	eax	Local variables
10067846 mov	dword ptr fs:[0],esp	
1006784D add	esp,OFFFFFF4h	EB -> ebp
10067850 push	ebx	Return Address
10067851 push	esi	064
10067852 push	edi	0x64
PRINT_CALLER;	: _PrintEnter("Sleep (0x%X)\n", du	wMilliseconds);
10067853 mov		Circle DD as assued due to perform stack frames
1006785A mov	eax,ebp	Since BP as saved due to saving stack frame
1006785C add	eax,4	We can move down 4 bytes to ref
1006785F mov	dword ptr [pStack],eax	the return address
10067862 mov	eax,dword ptr [pStack]	
10067865 mov	ecx,dword ptr [eax]	
10067867 push	ecx	

## Detours (continued)

#### \_win32.cpp is found in TRACEAPI found in detours under samples

Macro Code:

```
#define GET_CALLER_ADDR \
{
    __asm mov eax, ebp \
    __asm add eax, 4 \
    __asm mov pStack, eax \
}
#define PRINT_CALLER \
{
    int *pStack = 0; \
    GET_CALLER_ADDR \
    __Print("[[[ %X ]]]\n", *pStack ); \
}
```

## **Running Traceapi**

- syelogd.exe system event logging. Use this utility to set up a pipe
- withdll.exe load the detour traceapi.dll and detoured.dll into process sleep5.exe all done at runtime

Command Prompt (2)	×
C:\Documents and Settings\jraber.RED-UNCLASS\Desktop\Tools\Detours\bin>start syelogd.exe dm.txt

## **DLL Function List**

• In order for QuietRIATT to know which DLL each function comes from, it is necessary to disassemble each DLL beforehand and make a list of the functions. This list is read into QuietRIATT during initialization. IDA makes this easy.

Name	Address	Ordinal

kernel32.dll export list from IDA disassembly

• This is machine specific, so it has to be done on the same machine where the target program is run.

#### **Create Function List**

- Disassemble DLLs used in target application (e.g. kernel32, user32, ...)
- Copy and paste export list into a text editor

QuietRIATT_liblist.txt			
ActivateActCtx	7C80A644 1	kernel32.dll

#### Special Cases - Indirect calls

IF:	001	[[[ 401 printf	100 <u>6</u> ]]:	1
IF:	001	printf	(hello	world!

.text:00401001	mov	esi, ds:dword_40209C
.text:00401007	push	offset aHelloWorld ; "hello world!\n"
.text:0040100C	call	esi
.text:0040100E	add	esp, 8

```
// Check previous instructions until finding one with our reg in destination
for (int i=0; i<32; i++)
{
    prev_inst = decode_prev_insn(prev_inst);
    if (prev_inst == BADADDR)
        break;
    ua_anaO(prev_inst);
    if (cmd.itype == NN_mov &&
        cmd.Operands[0].reg == callReg &&
        cmd.Operands[1].type == o_mem)
    {
        set_name(cmd.Operands[1].addr, func_name);
        break;
    }
}</pre>
```

## **Special Cases - IAT Redirection**

#### **Detours Output**

IF:	001	[[[ 4D85B8 ]	]] (BMK) (DWORD = f)
IF:	001	TlsGetValue	(DWORD = f)
IF:	001	TlsGetValue	() -> b91e90

Call to a memory address that's not in the IAT

.text:004D85B2	call	dword_5733BC
.text: <mark>004D85B8</mark>	MOV	esi, eax

No data at the address, so check the xrefs

.data:005733BC 00 00 00 00	dword_5733BC	dd Ø
----------------------------	--------------	------

We find an IAT entry being moved into the address

.text:004D87C1	mov	eax, ds:TlsGetValue
.text:004D87C6	mov	<mark>dword_5733BC</mark> , eax

### **Special Cases - IAT Redirection**

```
// For all cross references of addr
for (bool ok=xb.first to(addr, XREF DATA); ok; ok=xb.next to())
    // If addr is being written to
    if (xb.type == dr W)
        ua anaO(xb.from);
        // See what value is being written. ex: mov addr, reg.
        if (cmd.Operands[1].type == o reg)
        {
            ushort myReg = cmd.Operands[0].reg;
            // See if previous instruction is setting reg
            prev inst = decode prev insn(xb.from);
            ua_anaO(prev_inst);
             if (cmd.itype == NN mov &&
                 cmd.Operands[0].reg == myReg &&
                 (cmd.Operands[1].type == o mem ||
                  cmd.Operands[1].type == o_near ||
                  cmd.Operands[1].type == o_far))
             {
                                                                       Could add a check to see
                set name(cmd.Operands[1].addr, name);
                                                                       if the addr is in the IAT, and
                found = true;
                                                                       if not, make a recursive call.
                break:
            }
    -}
```

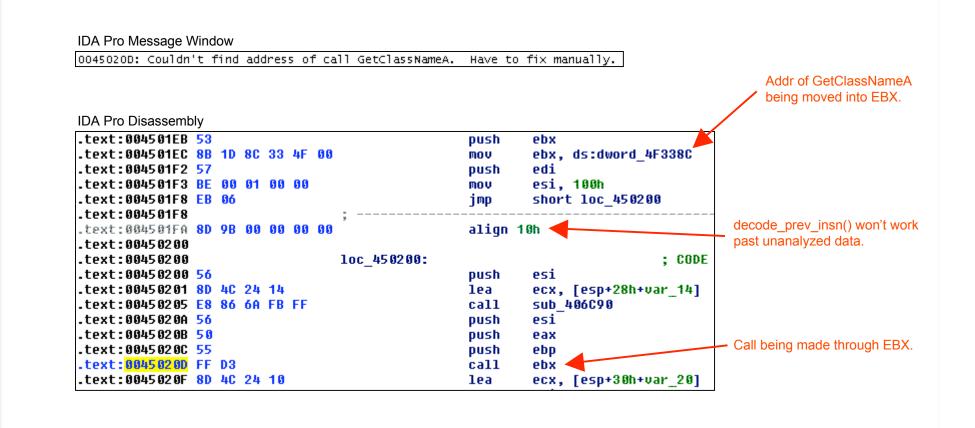

#### **Special Cases**

• Jump Tables

```
if (!addr_is_in_iat(addr))
{
    // Check to see if addr is a jump to IAT addr
    ua_anaO(addr);
    if (cmd.itype >= NN_ja && cmd.itype <= NN_jmpshort)
    {
        if (addr_is_in_iat(cmd.Operands[0].addr))
        {
            set_name(cmd.Operands[0].addr, name);
        }
    }
}</pre>
```

- IAT Copied to Newly Allocated Space
  - Not Handled... yet!

## Special Cases - Addr Not Found

## Special Cases - Addr Not Found

#### Special Cases - Unknown Calls

 If not every call is used during execution (which is likely), QuietRIATT won't know what the call is, so defaults have to be chosen as placeholders.

• When new functionality is discovered in the program, re-run Detours and QuietRIATT and the new functions will be added.

- How QuietRIATT Works
- Detours
- QuietRIATT
- Demonstration
- Summary
- Contact Info / Q&A

### Summary

- Not an ImpREC replacement, QuietRIATT fills a gap that ImpREC doesn't cover
- A stealthy solution
- Can save many hours of tedious, error prone manual labor

## **Future Work**

- Add ability for QuietRIATT to fix binary directly (no need for ImpREC).
- In cases where IAT is dynamic, keep internal list of entries
- Feed QuietRIATT run trace from stealthy debugger to fix case where "address not found"
